Overhead Press/PR 30-45 sec.	Touch Downs 30-45 sec.	Overhead Press/PR 30-45 sec.
PR = Partner Resistant		

NOTE: Proper stretching is CRITICAL for injury prevention and recovery. Muscle groups require 30 sec. Or more to be properly stretched and condition before an exercise.

NOTE: If you see a soldier developing an injury, do not WAIT for the soldier to go on Sick Call or to tell you. Be PROACTIVE, assess the soldier and determine if the soldier should go to Profile PT, Sick Call, or Hospital. Our job is to MAKE soldiers not BREAK soldiers. HOOHAH!

Exercises for Fitness Room		
Lower Body	Upper Body	Back
Light Fighters	Paratroopers	Tankers

Overhead Press (Dumbell)	Single Leg Squat	Overhead Press (Dumbell)
Crunch	Crunch	
Sit-Up (Rocky, Un/Supported)	Sit-Up (Rocky, Un/Supported)	
Supine Bicycle	Supine Bicycle	

NOTE: Profile PT is NOT a vacation from physical conditioning and soldierization. Injured soldiers can get a good work out within the limits of their profile. Good leaders seek to improve and challenge subordinates at EVERY opportunity and that comes from knowing your subject and your soldiers. Be positive and encouraging, soldiers typically do not want to miss training, especially if it involves graduating.

REMINDER: This company prohibits exercises that hyper-extends the lower back, i.e. Flutter Kicks, Leg Spreaders, Leg Lifts. There are other exercises that offer better conditioning with less probability to injury.
